Mobile IDE

File based IDE with code editor, suggestions and local execution. Includes a Python 3.10 interpreter, with the standard libraries, Cython and more than 100 third party pre-installed packages.

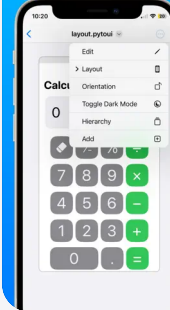

C Extensions and CLI tools!

Includes the clang compiler and the llvm bitcode linker and interpreter, with a Python module that provides a project structure for compilation, as well as a bridge between Python and LLVM for importing C/C++ extensions.

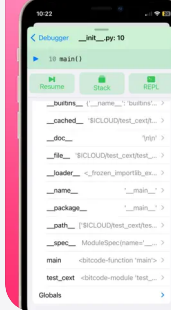

Build basic user interfaces

PytoUI is a bridge between Python and UIKit, that now includes a graphical UI editor that supports SwiftUI-like space management.

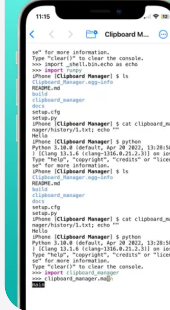

Graphical Debugger

Set breakpoints and inspect the stack or run code while running with FDB or when an exception occurs on your script.

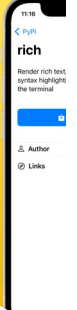

Terminal

Comes with standard UNIX shell commands, and a built-in Python shell that can run those with os system and subprocess.Popen, and installed command line tools (Bitcode or Python).

Install pack

Comes with pip package manager, as well as project manager, compile package can fail due to t

iPhone iPad Apple Watch

Pyto is an IDE for iPhone and iPad with a Python 3.10 Interpreter and all of the standard libraries plus more than 100 third party packages, as well as a C & C++ compiler and bitcode interpreter. Includes a terminal with standard UNIX commands, a code editor with code completion, support for Shortcuts, Picture in Picture, a graphical interface builder and a debugger.

First of all, regarding the title, this app works well, but it has an odd habit of asking me to purchase it— again, even though I've already purchased it. I need to restore the purchase by going online, ...

Love the app. Bugs happen. Where to report them?
