

Reusable KYC (Shared KYC)

Paybis allows you to avoid repeated KYC for your verified customers on a per-user basis (with applicant data sharing) for those using **Sumsub as a KYC provider**.

The recommended approach is to integrate **Shared KYC**, allowing seamless data sharing between the partner and Paybis via [Sumsub](#).

! Ensure that your Sumsub subscription allows for Sumsub KYC sharing. To verify this, reach out to your Sumsub Manager and confirm whether this option is available.

Understanding Customer Categories and Verification Requirements

To ensure compliance and risk mitigation, Paybis categorizes customers into four groups, each with specific verification needs:

- **Regular:** Requires Basic Verification (personal information, ID document, selfie).
- **US:** Requires Basic Verification plus Social Security Number (SSN) or Individual Taxpayer Identification Number (ITIN).
- **High Risk:** Requires Basic Verification.
- **UK:** Paybis will always request KYC, regardless of partner verification.

i Please find the document organized by country here: [Paybis SumSub configuration](#) to ensure that the relevant information is transmitted.

Required Data for Basic Verification

The following personal information is required:

Applicant data:

- Tax Residence Country,
- First Name (extracted from the POI),
- Last Name (extracted from the POI),
- Date of Birth (extracted from the POI),
- Nationality (extracted from the POI),
- Country,
- City,
- Street,
- Postcode.

- i **Important:** Please note that the "Country" and "Tax Residence Country" information should be obtained from the "Provided information" section, not from the "Extracted Information" section.

ended approach is to integrate **Shared KYC**, allowing seamless data sharing between the partner and Paybis via [Sumsub](<https://docs.sumsup.com>)

The following identity verification information is required:

- Government-issued ID document (e.g., passport, residence permit),
- Selfie (for liveness check).

- i If any of the required data is missing, Paybis may:

- Request Additional Information: Prompt the user to provide the missing details within the widget.
- Initiate Verification: Start a new KYC verification process if the missing information is critical.
- Reject the Transaction: In some cases, the transaction may be rejected if essential information is not provided.

- Only users whose applications have been approved on the partner's platform should be shared with Paybis.

Important Notes

- Ensure the data collected on your platform matches the information on the user's identification documents.
- Use Sumsub's API to securely transmit the collected data to Paybis.
- Consult your Paybis account manager for any questions or concerns.

Auto-accept previously completed questionnaire

+ Add new step

To configure the basic verification process for your applicants, please follow the steps below:

1. Identity Document Verification

Supported Document Types: Passport, ID Card, Residence Permit.

2. Selfie Verification

- Selfie Type: Choose Advanced liveness check.

3. Applicant Data Collection: Tax Residence Country - Required, Country - Required, City - Required, State - Leave as optional (not required), Street - Required, Postcode - Required.

i **Important**

For the following countries the TIN will be requested and validated on the first transaction:

Switzerland (CHE), Austria (AUT), Belgium (BEL), Cyprus (CYP), Denmark (DNK), France (FRA), Germany (DEU), Greece (GRC), Hungary (HUN), Ireland (IRL), Iceland (ISL), Italy (ITA), Liechtenstein (LIE), Luxembourg (LUX), Portugal (PRT), Slovenia (SVN), Spain (ESP).

If you want to skip the validation step at On/Off Ramp, you can request and validate TIN on your side.

For the following countries the TIN will be extracted from the user's identification document: Malta (MLT), Netherlands (NLD), Norway (NOR), Sweden (SWE), Finland (FIN), Lithuania (LTU), Latvia (LVA), Estonia (EST), Croatia (HRV), Slovakia (SVK), Czech Republic (CZE), Bulgaria (BGR), Romania (ROU), Poland (POL).

4. Questionnaire: Add the Basic questionnaire.

To apply the required financial questionnaire:

- Log in to your Sumsub dashboard.
- Create a new questionnaire by importing the provided JSON structure.
- Assign the Basic questionnaire to the basic verification flow.

Overview

Verification steps

1. Applicant data
 - Tax residence country
 - Country
 - State
 - City
 - Street
 - Postcode
2. Identity document
 - Passport
 - ID card
 - Residence permit
3. Selfie
 - Advanced liveness check
4. Questionnaire

To configure the verification process for high-risk clients, follow the instructions outlined below:

1. Applicant Data Collection: Tax Residence Country, Country, State (Optional), City, Street, Postcode
2. Identity Document Verification
 - Supported Document Types: Card, Passport
3. Selfie Verification: Use the Advanced liveness check for selfie verification.
4. Questionnaire: Select the Basic questionnaire to collect information regarding the client's financial status.

To apply the required financial questionnaire:

- Log into your Sumsub dashboard.
- Create a new questionnaire by importing the provided JSON structure.
- Assign the Basic questionnaire to the high-risk verification flow.

Integration Overview

This is achieved by exchanging the `SumSub` KYC data between your application and Paybis.

1. **Confirm with Sumsub:** Confirm with your Sumsub account manager that your pricing plan supports KYC sharing via API.
Next, click Next to confirm you would like Paybis to be the recipient (i.e. receive KYC data from you), you should be requested a Partner Token from your Paybis Account Manager. Once you receive the token, add Paybis as a Recipient in your Sumsub project.
2. **Send KYC data to Paybis:** If you would like Paybis to be the recipient (i.e. receive KYC data from you), you should be requested a Partner Token from your Paybis Account Manager. Once you receive the token, add Paybis as a Recipient in your Sumsub project.
3. **Receive KYC data from Paybis:** If you would like Paybis to be the donor (i.e. receive applicants who have completed KYC on Paybis side) you should generate a Partner Token and share it with Paybis so that we can add your company as a recipient.

```

    } } Applicant Data. "lang": "en"
    }, "type": "document_configuration": "Retail and E-commerce"
  ], verification_settings: enhance KYC processes. Please request the configuration
  "delivered": true,
  "setup_file": "your account manager."
}

```

Getting a Shared Access Token

- `paybis_test` for sandbox testing;
- `paybis` - for production environment.

⚠ Pay attention on the token expiration time `tTlInSecs` - set it with enough time period, so

that it's not expired at the point of the [Request call](#).

```

"defaultValue": null
}, {
  "localizedDesc": {
    {
      "language": "Technology",
      "id": "Technology"
    }
  }
}

```

Token Provisioning to Paybis

The token obtained from SumSub needs to be sent to Paybis during the request call. It will trigger the KYC data importing from SumSub.

```
"condition": null, "en": "Technology", "showCondition": true, "items": [{"type": "text", "value": "Technology"}]}
```

- Note that it's expected that a shared account

- Note that it's expected that a shared access token will only be generated for fully verified users. It means that the user's verification is completed and the GREEN result is received from SumSub. Otherwise, the user will be required to pass the verification within the Paybis widget flow.* Make sure to collect the Social Security Number (SSN) during the verification process for US customers. If the SSN is absent in the applicant profile imported via the shared token, the user will be prompted to complete verification within the Paybis widget flow.

```
    "value": "en",
    "value": "Type here"
```

Retrieving Shared Access Token from Paybis

If the user completes SumSub verification in the Paybis widget, a shared access token can be requested from Paybis by calling the [SumSub Shared Token](#) endpoint. The provided token allows the import of applicant KYC data from SumSub to the partner's system.
