Monika Kurczyńska, AI R&D Director

When people ask what it's like to build the foundations of Opera's AI Development Hub, I always say it's a mix of science, creativity, and

that our ideas reach users quickly so we can learn from real feedback, not just theory.

Inside Opera's AI & Browser Innovation Hub

Q: How is Opera redefining what browsers can be?

A: A few years ago, browsers weren't seen as the most exciting part of tech, but that's changed. Today, a big part of our lives is the web, and the way we interact with it is much more different, especially in the era of AI, which gives the user more powerful tools to interact with the web. The browser has become more and more important.

Take Aria, our AI chat. It was the first system with real-time access to web information. While others were still experimenting, we already had the infrastructure, and experience to make it work.

We also built an LLM-agnostic system which allows users to switch

proud to support this ecosystem, including the AI Olympics, which celebrates that same spirit of innovation.

Wrocław isn't just where our AI Hub is located; it's the ideal environment to grow, experiment, and push the limits of what AI can do for everyday users.

Q: What's your vision for the future of Opera's AI Hub?

A: Our goal is to make Opera a global standard for how people interact with the web alongside with AI. We already have strong foundations, both technical and cultural, and now we're focusing on deeper integration – connecting human behavior with intelligent systems that adapt to real needs.

There's a special kind of creative energy in Wrocław, something between technical, scientific and artistic. We like to test, explore,

Understanding AI conceptually, not just technically, is what leads to

meaningful progress. Programming can be learned, but curiosity and insight are what truly drive discovery.

Q: How would you describe the culture within Opera's AI Hub?

A: Our culture is built on curiosity and engagement. We look for people who love learning and see technology as an opportunity to make things better.

We're also very hands-on. We use what we build every day. A fun example is that we use our Neon browser to order lunch. It might sound small, but it means we notice what needs improvement immediately because we rely on it ourselves. It keeps us motivated and connected to the products we create.

If you want to build something that millions of people actually use, this is the place. You can see your work make an impact in real time.

A: If you want to see your ideas turn into real tools used by millions of people, Opera is the right place. Here, experimentation quickly turns into action and impact.

We value curiosity, creativity, and flexibility – the qualities that drive true innovation. If you're passionate about shaping how people interact with AI and want to build technology that makes a difference, you'll feel right at home.

Looking Ahead

At Opera's AI Development Hub, we're not just building new features – we're shaping the future of how people connect with technology.

Our work lives at the intersection of science and creativity, powered by a diverse team that turns bold ideas into real, global impact.
