Package org.apache.samza.storage

Interface Summary

Interface	Description
BlobStoreAdminFactory	Factory to create instance of StateBackendAdmins that needs to be implemented for every state backend
SideInputsProcessor	The processing logic for store side inputs.
SideInputsProcessorFactory	A factory to build SideInputsProcessors .
StateBackendAdmin	Admin responsible for loading any resources related to state backend
StateBackendFactory	Factory to build the Samza TaskBackupManager , TaskRestoreManager and StateBackendAdmin for a particular state storage backend, which are used to durably backup the Samza task state.
StorageEngine	A storage engine for managing state maintained by a stream processor.
StorageEngineFactory<K,V>	An object provided by the storage engine implementation to create instances of the given storage engine type.
TaskBackupManager	TaskBackupManager is the interface that must be implemented for any remote system that Samza persists its state to during the task commit operation.
TaskRestoreManager	The helper interface restores task state.

Class Summary

Class	Description
KafkaChangelogRestoreParams	Provides the required for Kafka Changelog restore
