Spring Session

4.1.0

OVERVIEW

LEARN

SUPPORT

SAMPLES

Spring Session provides an API and implementations for managing a user's session information.

Features

Spring Session makes it trivial to support clustered sessions without being tied to an application container specific solution. It also provides transparent integration with:

- [HttpSession](#) - allows replacing the HttpSession in an application container (i.e. Tomcat) neutral way, with support for providing session IDs in headers to work with RESTful APIs
