Label your SSH keys

We are happy to announce that you can now add labels to your SSH keys. This makes managing multiple SSH keys much simpler. Lets be honest, this blog should have happened a while ago and for that we say, thanks for your patience. If you want to...

Title (required)

gexport: support exporting the entire hg repo from scratch

Description

This makes it possible to take an existing Hg repository and make a Git repo out of it

Description

PLEASE REVIEW:

This will scan commit messages for @mentions and send email notifications about it.

I am making sure that check that we only ever send one notification for a sender/receiver/node since you don't want to get another mention email everytime someone pushes up a copy of your repo.

Comments (10)

Dylan Etkin

15 days ago

Hey dudes. Can you have a quick look at this. I think the code to make sure I am not sending duplicate emails when someone pushes up a copy of a repo is fine but I would like to have someone look at it before I pull it in.

Nicolas Venegas

14 days ago

In `apps/async/tasks.py`, instead of making the `author` the repository owner, isn't there a push user we can use?

Delete | Reply

Dylan Etkin

13 days ago

Sure, I will try to fallback to the push_user and then the repo owner if I can't find the other two.

Now with Code Commenting and Mentions

Two months ago we revamped our pull request feature to help teams using DVCS and Bitbucket increase their productivity. One bit was missing though; the ability to easily have a conversation around code changes. This is why we are excited to...

Dress up your repository with a README

Have you ever thought it strange that Bitbucket displays READMEs on the “source” screen rather than the “overview” screen? Many repositories have the landing page set to “source” to accommodate this quirk. The natural home for READMEs is the overvie...

Repository search filtering

It’s been amazing to watch all of the projects being added to Bitbucket since modifying our pricing plan in late September. The growth of your public and private repositories even has us looking to expand our diskpace sooner than we original...

New feature: Downloads

Ask, and you shall receive. We’ve just unrolled a new feature on the site, Downloads. This lets you upload any file you want to your repository, be it public or private. The files are uploaded directly to Amazon S3, so our servers won’t even break a sweat....
