Support for Xcode in Bitbucket

Developer efficiency is always top mind for the Bitbucket team and we're constantly looking at ways to get you up and coding as quickly as possible. For example, knowing so many of you use Sourcetree as your Git client of choice meant it was a no-brainer...

Docker containers in Bitbucket Pipelines

Why Bitbucket Pipelines is the best CI/CD tool for your Docker-based software

In the Bitbucket team, we believe containerization is the future of continuous integration and deployment. Running your software in containers brings consistency and predictability all the way from your development environment, through your CI/C...

The screenshot displays the Bitbucket Pipelines interface. On the left, 'Pipeline #3' is shown in a paused state. A warning message states: 'This pipeline was paused because another pipeline was deploying to production. Learn more'. Below this, a 'Paused' button and a 'Rerun' button are visible. The pipeline's duration is '56 sec • 10 days ago' and it was 'Push by Emma'. A 'Commit' section shows a commit hash '8e00671'. The pipeline steps are 'Build and test' (completed with a green checkmark) and 'Deploy to production' (pending). A 'Resume' button is highlighted with a white circle. On the right, the 'Logs' panel shows the build steps: 'Build setup' (13s), 'python build_and_test.py' (8s), 'aws deploy push --application-name \$APPLICATION_NAME --s3-location s...' (30s), and 'Build teardown' (<1s). A 'Download raw' link is at the top right of the logs panel.

Introducing automatic concurrency control for Bitbucket Deployments

Last month, we announced the general availability of Bitbucket Deployments, a new feature within Bitbucket to help you keep track of the status of your shared deployment environments. With Deployments in Bitbucket, your team has every...

Watch this! New look, watch repos, and unicorns in Bitbucket 5.10

Does it ever feel like the codebase you work in (or its core dependencies) can change in the blink of an eye? As soon as you've moved to the latest version, a new stable release comes out. It's even more frustrating when it happens inside your company....

6 ways to integrate a data strategy into your workflow

This article was written with Looker, a business intelligence software and big data analytics platform that helps you explore, analyze, and share real-time business analytics easily. Most organizations only use a fraction of available data. Integrating ...

Bitbucket code search API is now available

Last year we shipped the highest requested feature for Bitbucket Cloud – code aware search, and we're delighted with your feedback and responses. We're excited to announce that we've published the Bitbucket Cloud code search API delivering...

Speed up your build with parallel steps in Pipelines

When we built Bitbucket Pipelines, one of our goals was to make a tool that developers love. And if there's one thing developers love, it is getting their builds finished more quickly. Last year, we added dependency caching and detailed timing...

Bitbucket Data Center at scale: collaboration at a global marketing agency

Have you ever tried to get five engineers to use the same IDE? No easy feat, right? A global marketing organization took on a significant challenge when uniting almost 1,000 engineers across several offices onto a single version control system and hostin...

Bitbucket, uninterrupted: app diagnostics and better workflows in Bitbucket Server 5.9

Bitbucket Server is the convergence of individual work and team collaboration. Administrators ensure the git server availability, enabling developers to complete deployment cycles. Those teams operate independently but share common goals like,...

Git LFS now available in Bitbucket Pipelines

Bitbucket Pipelines now has built-in Git LFS support, allowing you to seamlessly build, test and deploy LFS files in your builds! To enable it, just add `lfs: true` in the clone section of your `bitbucket-pipelines.yml`. If you don't enable this feature, your clone will...

3 steps to convince your team it's time to get Data Center

It's a brand new year, and with it will come a brand new budgeting cycle. Something many wait for, and maybe even dread to some extent! You start thinking about the tools and services that could accelerate your business results. Perhaps you've already...

Confidence to release early and often: Introducing Bitbucket Deployments

Teams are deploying code faster than ever, thanks to continuous delivery practices and tools like Bitbucket Pipelines. But this has caused a huge problem: it's hard keeping up with all the deployments and knowing where things are at. That's why we've built...

Better repository search and fork discovery come to Bitbucket Server 5.6

How long has your code base been around? Jira Software is our oldest project at Atlassian clocking in at 15 years old. That's a lot of code, and more importantly a lot of repositories with the word "Jira" in the name! Our switch to Git, where it's common to...

Pipelines manual steps for confidence in your deployment pipeline

Bitbucket Pipelines gives you the ability to build, test and deploy from directly within Bitbucket Cloud. Today, we’re excited to announce that you can now use manual steps in Bitbucket Pipelines. With manual steps, you can customize your CI/C...
